Professional Experience

Specialist Programmer

Infosys, Mumbai

Jan 2024 - Present

- Led a cross-functional team of **10+ developers** to build a cloud self-service portal using React and NestJS, achieving **95%+** sprint completion rate and **25+ stable production releases**.
- Architected and delivered **5+ service catalogs** (VM creation, DBaaS, Storage-as-a-Service) serving **1000+ users**, replacing legacy workflows and improving **provisioning speed by 40%** through direct AWX API and Ansible automation.
- Integrated Kafka and RabbitMQ across **12+ microservices** to enable asynchronous, event-driven flows, improving system scalability and resilience under peak provisioning loads.
- Maintained **85%+ unit test** coverage with Jest and enforced quality gates, reducing bugs by 30% and improving release confidence.
- Implemented n8n-based automation for operational tasks, reducing manual ops effort for the cloud team.
- Conducted **30+ client demos/UAT** cycles and participated in **20+ architecture discussions** on microservices and cloud-native patterns, driving adoption of scalable design choices.

Software Development Engineer

Accenture, Mumbai

June 2022 - Jan 2024

- Engineered a contract management system using **React 18** that processes annual payments of over **\$263M** and streamlines manual processes reducing time spent by **5500+ users**.
- Developed **RESTful APIs** in Node.js/Express with **custom middleware** for logging, error handling, and validation, improving maintainability.
- Optimized UI performance with React, HTML5, Bootstrap, and CSS3, improving page load and interaction performance and contributing to a **40% increase in customer engagement**.
- Led a UI team of **4 developers**, setting coding standards, running daily code reviews, and mentoring on React and Angular best practices.
- Ensured code quality using SonarQube and unit tests (Karma/Jasmine), achieving **75% coverage** and **reducing defects by 25%** across multiple releases.

Associate Software Engineer

Accenture, Mumbai

Dec 2020 - May 2022

- Built reusable Angular 12 components for configurable tables, forms, and templates, reducing feature **development time by 30%**.
- Drove micro-frontend migration by creating POCs, documentation, and internal training sessions, helping teams adopt modern frontend architecture.
- Reduced application bundle size from 10MB to 6.5MB through code refactoring and optimization techniques, improving **loading speed by 40%**.
- Contributed to three major program iterations handling millions of payments with 99.9% accuracy and zero production defects, focusing on reliability and observability.

Education

Bachelor of Engineering and Technology: CGPA- 9.38/10

2016 - 2020

University of Mumbai

- Relevant Courses:** Object-Oriented (Java), Structured Programming (C/C++), Database Management (SQL), Computer Architecture, Neural Networks

Skills and Accomplishments

Programming/Scripting Languages: CSS/SASS, HTML, JavaScript (ES6), TypeScript
Libraries & Frameworks: Angular, Bootstrap, Express, MUI, Nest.js, Node.js, React, MongoDB, Socket.io
Tools & Platforms: N8N, AWX, Git, Heroku, Netlify, VS Code, Webpack, Postman
Microsoft Certified: Azure AI Engineer Associate
Awarded **RISE Certificate of Excellence** from Infosys for 2 consecutive years (2024,2025) for technical knowledge and exceptional quality of work
Awarded **Pinnacle Award** from Accenture for 2 consecutive years (2023,2022), showcasing teamwork & delivering exceptional results

Projects

Cloud Self-Service Portal (Charter Communications)

Feb 2024 - Present

- Built a self-service portal for cloud resources (VMs, DBaaS, storage), now used by 1000+ internal users.
- Migrated from Morpheus API to direct vSphere and AWX API integrations, saving an estimated **\$1.2M annually** in licensing and ops costs and improving provisioning speed by 40%.
- Implemented secure admin modules for managing 1,000+ users and AD group permissions with role-based access control.

Poles and Payment Management System (AT&T)

June 2022 - Jan 2024

- Contributed to the development of a unified portal for utility companies and 3rd-party vendors to manage pole-related operations and financial workflows.
- Designed features for invoice submission, payment initiation, and real-time payment status tracking, improving vendor transparency and **reducing manual follow-ups by 60%**.
- Collaborated with stakeholders to define user flows and ensure seamless backend integration with AT&T's internal Payment Management System.

Lease Management and Payment System (AT&T)

Feb 2021 - Dec 2022

- Built and maintained Angular modules for scalable contract and lease management, ensuring consistent data validation and secure role-based access.
- Implemented secure role-based access and data validation mechanisms to maintain integrity across contract records and payment transactions.
- Built secure modules for vendors to upload invoices and supporting documents, ensuring compliance with AT&T's financial and operational standards.
